

The DLH Packer is a hydraulic set single-string retrievable packer and may be used in virtually any production application. Tubing pump pressure is used to set the packer and the setting force is locked into the packer by a body lock ring. A large internal by-pass reduces swabbing when running and retrieving. The by-pass closes when the packer is set, and opens during the releasing process to allow pressure equalization. Shear screws are used to control the packer release. The

standard DLH Packer is designed for differential pressures up to 7,500 PSI.

Features

- Hydraulic Set, straight pull release. Hydraulic force does not effect shear
- Adjustable shear set and adjustable shear release
- Available in most sizes
- Adjustable safety shears
- Thermal capabilities
